The go.Med Success

“We benefitted from the knowledge and expertise brought together in a single platform in designing and validating our Alphacor implant. The regulatory compliance process became much easier!” **Eva Larra, AJL Ophthalmic**

“go.Med helped us to reduce costs and make additional resources available to accelerate the project timeline and reduce our risk of failure.”
Ainitze Mendizabal Dones, Cyber Surgery

“Thanks to go.Med and the QbD approach, our product development process was much smoother. Discussing possible indications with clinicians first-hand was essential.” **Raluca Fratila, Universidad Zaragoza**

- ✓ One-stop-shop covering all development needs from pre-clinical development to clinical testing
- ✓ Innovative risk-based Quality-by-Design concept
- ✓ Minimised risks for investors
- ✓ Faster time to market
- ✓ Reduced development cost
- ✓ Specially designed for high-risk medical devices in Class IIb and Class III

go.Med– One-Stop-Shop for Comprehensive MedTech Innovation

go.Med is a first-of-its-kind acceleration platform specialised in the development of high-risk medical devices (classes IIb and III). Our connected network of entities is dedicated to expediting the development and market release of technologically-advanced, economically viable and top-tier medical devices that comply with the latest EU Regulations.

go.Med is a one-stop-shop for services along the whole value chain that offers businesses an innovative edge and competitive advantage in the international market.

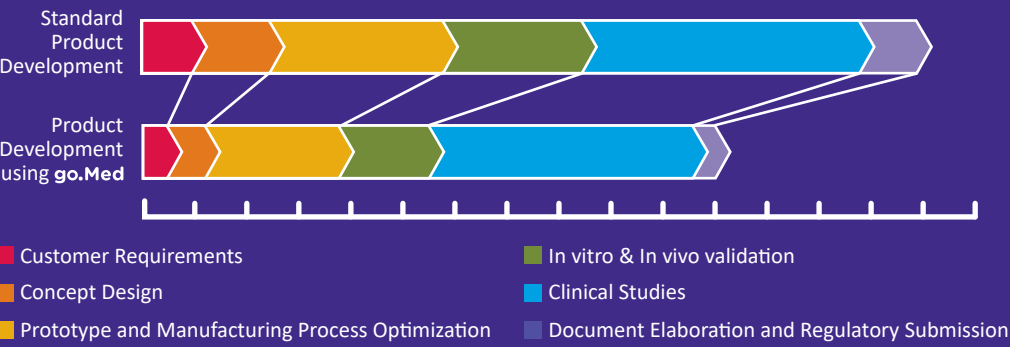

The go.Med Approach

go.Med offers a comprehensive Quality-by-Design approach that safeguards products from unexpected setbacks. By embracing a comprehensive **risk-based approach** that puts safety, quality, and efficacy at the forefront, go.Med enables medical device developers to achieve exceptional results while **minimising risks** and **maximising profitability**.

Time to market

go.Med introduces disruptive, highly successful devices to the market in a shorter time frame, with investments yielding a faster-than-average return.

Services Offered

Technology Development

- Efficacy Testing
- Safety Testing
- Characterisation
- Prototyping
- Upscaling
- Clinical Studies

Business Support

- Strategic business advice
- Market analysis
- Technologies scouting services

Additional services

- Fundraising services
- Grant proposal support
- Co-development projects
